MEDIOR PHP DEVELOPER
ANDRÁS GULÁCSI

✉ guland@protonmail.com   📞 +36 20 212 79 90

OBJECTIVE

My objective as a PHP / Laravel developer as a member of the team, is to make use my experience and skills that I obtained during planning, development, management, and support of (mainly) PHP-backed websites and web applications, so that I could contribute to the success of the (any) web project(s).

STRENGTHS

- **E-commerce development experience:** I have worked with a number of PHP-based e-commerce engines / frameworks / software such as WooCommerce, Opencart, and Magento 2 which provided a greater insights into their possibilities, and the challenges they pose during development.

- **Laravel PHP framework knowledge:** I have been seriously working on improving my Laravel knowledge since 2022. Now, I consider it my primary framework, and I like working with it. Fortunately, I have been able to use it at workplace. My open source Laravel starter project is accessibly here: https://github.com/SalsaBoy990/laravel-clean-ui-starter, the demo is here: https://laravel.webandras.hu/ (username: gulandras90@gmail.com, password: FSrztfvr5gii2).

- **I have client-oriented approach:** I like helping for businesses in their web appearance: have created websites and web-stores for my friends' (and others') businesses, and operating / managing them for years without serious problems. Participating in numerous projects is no news to me, as I already know what its like to work project-based and as an entrepreneur. My portfolio website: https://www.gulacsiandras.hu/

- **Worked at different roles and workplace environments:** I have been full-time employee at small, and mid-size local companies, sole (Kata) entrepreneur until the law has been changed, worked completely alone, in small teams, remotely, and in office setting as well. I had to get to know the inner workflow of these places – learned a lot from it.

PROFESSIONAL EXPERIENCE

FULLSTACK LARAVEL DEVELOPER, OPENCART   **2023 – 2024**
Code4Flow Kft., Szeged (full-remote)

I participated in Laravel projects all by my own, as a sole developer: Created the new Laravel website of the company with a CMS administration. I wrote a Laravel micro-service that communicates with the Kulcs-Soft accounting software (in XML format), with certain parts of the software. Performed bug-fixes and smaller updates on the Laravel website/CMS of CSMKIK (Chamber of Commerce and Industry in Csongrád County).

PHP development of Opencart web stores (like szaunabolt.hu, reburg.hu) was also part of my responsibilities (module development-extension, bug-fixes).

PHP BACK-END DEVELOPER   2022 – 2023
Nexum Magyarország Kft., Szeged

My scope of work was back-end support, bug-fixes based on tickets, new feature development, extending functionalities of the "Career Portal" recruitment software, written in PHP (uses MVC architecture), as part of a small team of four. Obtained a lot of back-end knowledge, and had to write lots of SQL (migrations) scripts.

MEDIOR FRONT-END DEVELOPER   2021 – 2022
As "Kata" entrepreneur, at DRB Services Kft., Budapest (remote)

I worked on the front-end side development, and management of Magento 2 stores to help the back-end colleagues. For clients such as Emaki.hu, Cutler & Gross, and So Fragrance. Received a lot of e-commerce experience from these projects.

Participated in the development of a MERN-stack application (Simirity.com) where I used React.js and TypeScript. I also had my own React.js/Gatsby.js full-stack projects where the back-end was Strapi CMS. For example: an application developed for an interactive table/screen for the Money Museum in Budapest (topic: gold and silver coins, numismatics), and a landing / corporate website for Urben Design Group. In addition, I also participated in WordPress development (Simirity.com).

Worked in Agile-like environment, with daily stand-ups, used Jira software for tracking the tasks.

JUNIOR WEB DEVELOPER (PHP/JS)   2020 – 2021
CreatIT Solutions Kft., Szeged

I gained my first office experience as developer, in small team. My own tasks were to develop WordPress websites (themes, plugins, site-build), and to a lesser extent, I participated in Laravel REST API development in the team. I gained a lot of professional knowledge which provided a good basis for career.

EDUCATION

UNIVERSITY OF SZEGED (2016-2020)
Doctoral School of Geosciences, PhD student, researcher (unfinished)

UNIVERSITY OF SZEGED (2014-2016)
Environmental Science MSc.

UNIVERSITY OF SZEGED (2010-2013)
Geography BSc, with geoinformatics faculty
